

WEB APPLICATION DEVELOPMENT AND SERVICES AGREEMENT

This Web Application Development and Services Agreement ("Agreement") is made and entered into on this **3rd day of June 2026**, by and between:

Gati Growth Labs Private Limited, a company incorporated under the laws of India with CIN: U70200RJ2026PTC112534 & GST: 08AAMCG8875C1Z5, having its principal place of business at Sukhdev Singh Nagar, Behind RIICO Area, Ward 1, Nohar, Hanumangarh, Rajasthan, Bharat - 335523 (hereinafter referred to as the "**Agency**", which expression shall, unless repugnant to the context or meaning thereof, include its successors and permitted assigns);

AND

LR Enterprises, a partnership firm with GST: 06AALFL2496G1Z2, having its registered office at Opp Guru Daksh ITI, LR Enterprises, Balsamand Road, Guru Daksh ITI, Hisar, Hisar, Haryana, Bharat - 125001, represented by Mr. Rohit Goyal (hereinafter referred to as the "**Client**", which expression shall, unless repugnant to the context or meaning thereof, include its successors and permitted assigns).

The Agency and the Client are hereinafter individually referred to as a "Party" and collectively as the "Parties".

1. SCOPE OF WORK

The Agency agrees to develop, set up, and maintain a QR-based web application for the Client as per the requirements detailed below:

1.1 Application Core & Access:

- The web application will be a QR-based platform functioning as a subdomain of the website 'doorsmith.in'.
- The primary purpose of the application is to incentivize carpenters via retail shop counters.
- The admin (the Client) will retain absolute control over the web application system.

1.2 Roles & Registration Hierarchy:

- The admin will create access and login credentials for sales representatives.
- A "Distributor" role shall be integrated into the system hierarchy, positioned between the Sales Representative and the Retail Counter.
- The Distributor functionality shall be deactivated by default at the time of deployment; however, the admin retains the sole authority to activate this role for future requirements.
- Upon activation, the Distributor will possess functionalities similar to those of a Sales Representative, including the authority to register retail counters.
- Distributors shall strictly not have the authority to approve carpenter registrations.
- Sales representatives will have the authority to register the retail counters.
- Sales representatives will have visibility of all associated counters, the carpenters registered under those counters, and the total items sold.
- The retail counter will be responsible for registering the carpenters.

1.3 Carpenter Registration & Interface:

- The counter will send a web app link to the carpenter, who will then download and install the app.
- During registration, the carpenter must submit their mobile number, and a photo will be captured using their front camera.
- The carpenter registration will require a 2-way authentication process, verified first by the counter and subsequently by the admin/sales representative.
- Once logged in, the carpenter's application will remain logged in indefinitely until manually logged out by either the carpenter or the Admin.
- The carpenter's main screen will display four primary elements:
 - Total reward points: Clicking this shows the history of the last 20 credit or debit transactions.
 - "Scan the QR" button.
 - Product installation video: In the application there will be links of either YouTube/Instagram/Facebook videos; these links will redirect the carpenter to the client's respective YouTube/Instagram/Facebook page.
 - Product Offerings/ New Product: Admin may upload images or pdf of their current and upcoming products.

1.4 QR Code Mechanics & Scanning:

- Upon scanning a product or box QR code, the carpenter will receive a notification in the application confirming the specific product SKU scanned, the points credited for that scan, and their total accumulated reward points. At 11:30 PM every night, the carpenter will receive a consolidated WhatsApp message from the registered mobile number of "DoorSmith" stating, how many point has been accumulated today and total reward points is this much.
- Three types of QR codes will be implemented:
 - Master box QR: for internal scanning at the Client warehouse,
 - Small box QR: rewarding points for all items inside the box,
 - Product QR: for individual, loose quantity purchases.
- If a small box QR is scanned, the individual product QRs contained within that box will be systematically disabled.
- It is structurally recommended that the small box QR is placed so that opening the box for loose sales will tear the QR code, preventing any doubling of reward points.

1.5 Redemption Token System Workflow:

- The points shall be locked for the redemption in the system till the time the counter marked the transaction complete of a particular customer (the end user). Transaction complete means, after receiving all the returns if applicable.
- The carpenter (Khati) shall initiate the redemption process by selecting the "Redeem Points" option within the web application.
- Upon successful submission of the redemption request, the system shall automatically generate a unique Redemption Token (Example: RDM-784512) linked to the approved reward request.
- The carpenter may visit any participating retail counter and present the generated Redemption Token for reward collection.

- The retail counter shall enter the Redemption Token into the web application for verification. Upon successful verification, the system shall display only the information necessary to fulfill the reward request, including
 - Token Status: Valid / Invalid Token
 - Reward Name: Example: Mixer Grinder,
 - Delivery Status: Ready for Delivery
- The counter shall receive the instruction to fulfil the request from the administrator.
- Sales representatives will strictly have no authorization or power to settle redemption points. The admin may control the entire transaction.

1.6 Confidentiality Controls (Counter Access Restrictions):

- The retail counter shall not have visibility into the total reward points available in the carpenter wallet, the purchase history of the carpenter, or the product scan history.
- The retail counter shall not have visibility into the sales value generated through any counter, the point generation source, or information relating to transactions conducted through other counters.
- The system shall ensure complete confidentiality of cross-counter business activity while enabling redemption from any authorized participating counter.

1.7 Product Return, QR Reactivation:

- If a carpenter returns a product to an authorized retail counter, the counter shall initiate a return transaction by scanning the returned Product QR code through the web application.
- The information of the scanned products shall be captured by the admin panel. The admin shall reactivate the QR code.
- Upon successful processing of the return transaction, the reward points previously credited to the carpenter against the scanned Product QR code shall be automatically reversed and deducted from the carpenter's reward balance.
- Following the successful reversal of reward points, the Product QR code shall be reactivated and made eligible for future scanning and reward allocation upon resale of the same product.
- The retail counter may be credited with a predefined return-handling incentive, as determined by the admin, for successfully processing a valid return transaction.
- Upon resale of the returned product, the reactivated Product QR code may be scanned by another eligible carpenter, and the corresponding reward points shall be credited in accordance with the prevailing reward structure.
- The system shall maintain a complete audit trail of all QR code activities, including initial scans, reward credits, return transactions, reward reversals, QR reactivations, and subsequent rescans for administrative review and reporting purposes.
- The admin shall retain the authority to monitor, review, approve, reject, suspend, or investigate any return transaction or QR reactivation activity suspected of misuse, fraud, duplication, or manipulation.
- No reward points shall be permanently duplicated for the same product unit. Any reward points credited against a Product QR code that is subsequently returned shall be reversed prior to the reactivation of such QR code.

1.8 QR Generation Portal:

- Sheet and Sizing Management: The portal will allow the admin to manage and configure the layout. While the final printing sheet size can be managed or selected by the Admin, the Admin

shall also have the authority to define the dimensions and size of each individual QR code label within that sheet.

- **Design & Information Mapping:** The visual layout and design parameters of the QR codes will be managed entirely by the Admin. Once the layout is configured, the system will dynamically populate the QR codes (Master, Small, or Individual) into the fixed-size grid sheet based on the input parameters.
- **Embedded Product Metadata:** Each generated QR code must be bound to specific metadata visible to the admin, including:
 - Product Information/SKU
 - Maximum Retail Price (MRP)
 - Sales Price
 - Assigned Reward/Redemption Points.
- **Parent-Child Traceability (Hierarchical Linking):** The portal must feature a structured relational mechanism that establishes a clear lineage from the Master Box QR code down to the Small Box QR code, and finally to the Individual Product QR codes contained within.
- **Unique Serialization for Lifecycle Support:** Every QR code will be generated with a distinct, sequential unique identification number. This unique identifier will serve as the system anchor to accurately track the unit during the return workflow, enabling the admin to identify the specific QR code, reactivate it for future distribution, and reliably deduct the corresponding points from the target carpenter's account balance.
- **Preventive Serialization Guard:** The system must structurally block the generation or printing of duplicate unique numbers within the database to prevent reward duplication or configuration errors.
- **Print-Ready Export Engine:** The system will compile the populated sheets into high-resolution, scale-accurate PDF formats optimized for commercial industrial printers to ensure scan ability.
- **Batch Activation & Status Control:** Every generated batch will be logged in an administrative audit trail detailing the date of generation, author, count, and starting status (e.g., "In Warehouse - Inactive" until scanned at the warehouse or dispatched).

1.9 Dashboards & Support:

- The admin and sales representatives will be provided with operational dashboards based on the Agency's expertise.
- If the Client requires additional data visibility, up to three additional custom dashboards will be created.
- The Agency will provide hyper-care support for the application during the first three months post-launch.
- After the initial three months, all queries and support requests will be handled on a weekly basis.

2. EXCLUSIONS & OUT OF SCOPE

To ensure absolute clarity, the following items are expressly excluded from the Scope of Work and the commercial fees outlined in this Agreement. Any requirement falling under this section shall require a separate addendum and additional commercials:

- **Content Creation:** Production, shooting, or editing of the "Product Installation Video" or any other graphical/promotional assets. The Client must provide all media assets ready for upload.
- **Third-Party Platform Subscriptions:** Aside from the development integration, any recurring server hosting fees, domain name registration fees (for doorsmith.in), and database scaling costs beyond the basic setup are out of scope.
- **Hardware & Printing:** Procurement of hardware (scanners, mobile devices) and the physical printing/pasting of the QR codes on the master boxes, small boxes, and individual products.
- **Alternative Notification Systems:** SMS Gateway integrations or native push notifications (other than the agreed WhatsApp integration and basic app notifications).
- **Physical Operations Liability:** The Agency is not responsible for the physical tearing of QR labels or inventory mismanagement at the Client's warehouse or counters.
- **Third-Party API Outages:** The Agency is not liable for downtimes or delays caused directly by META (WhatsApp) infrastructure or third-party web hosts.

3. COMMERCIALS & PAYMENT TERMS

3.1 Development & Setup Cost: The total cost for the development, setup, and deployment of the web application is **INR 45,000/- (Indian Rupees Forty-Five Thousand Only)**. This amount is inclusive of applicable Goods and Services Tax (GST).

3.2 Hosting & Infrastructure Thresholds (Free-Tier): The web application shall initially be hosted on Vercel utilizing its free-tier infrastructure. Based on the current availability and limits of the specified free-tier plans, the system is designed to handle the following maximum capacities without incurring additional server costs:

- Administrative Access: 1 Admin Account
- Management Logistics: Up to 100 Sales Representative Accounts & Up to 100 Distributor Accounts
- Retail Network: Up to 1,000 Retail Counter Accounts
- End-User Network: Up to 10,000 Carpenter Accounts
- System Transactions: Up to 100,000 QR Code Scans per day & up to 2,000 QR Code Generations per day
- Google Firebase (SMS): Up to 1,000 SMS notifications per day
- META (WhatsApp): Up to 1,000 messages per day (Note: The dedicated WhatsApp business number must be provided by the Client).

3.3 Cost Liabilities & Overage:

- **Agency Liability:** For the first (1st) year of operation, the Agency shall bear any unforeseen additional Vercel hosting costs, provided the platform's usage remains strictly within the transaction limits explicitly stated in Clause 3.2.
- **Client Liability (Third-Party Changes):** The Agency liable for any third-party price fluctuations, policy updates, or newly introduced charges by Vercel only for the 1st year from the date of go-live or successful demo completion. Any required upgrades to paid tiers due to the Client exceeding the thresholds in Clause 3.2 shall be at the Client's expense for Vercel (starting 2nd year) and Google Firebase/WhatsApp whenever applicable.

3.4 Third-Party Integration & Variable Costs: All external, variable costs related to META (including but not limited to WhatsApp API usage, per-conversation charges, template approval fees, and account verifications) shall be borne entirely by the Client and billed on an actuals basis.

3.5 Annual Maintenance Charges (AMC): Comprehensive maintenance and support for the platform are included at no additional cost for the first (1st) year, commencing from the official "Go-Live" date (post-successful demonstration to the Client). From the second (2nd) year onwards, any ongoing Annual Maintenance Charges or support packages shall be mutually discussed, agreed upon, and executed by both Parties via a separate written addendum.

3.6 Taxes & Statutory Deductions: The Client is authorized to deduct Tax Deducted at Source (TDS) as per the applicable provisions of the Indian Income Tax Act, 1961, from the payments made to the Agency. The Client agrees to issue and provide the necessary TDS certificates to the Agency in a timely and statutory manner.

4. TERM & TERMINATION

- **Term:** This Agreement shall commence on the Effective Date and shall remain in full force and effect unless terminated in accordance with the provisions herein.
- **Termination for Convenience:** Either Party may terminate this Agreement by providing a prior written notice of thirty (30) days to the other Party.
- **Termination for Cause:** Either Party may terminate this Agreement immediately upon written notice if the other Party commits a material breach of any term of this Agreement and fails to cure such breach within fifteen (15) days of receiving written notice thereof.
- **Effect of Termination:** Upon termination, the Client shall pay the Agency for all work completed and out-of-pocket expenses incurred up to the date of termination. If terminated during the AMC period, any unearned portion of advance AMC payments shall be refunded on a pro-rata basis.

5. INTELLECTUAL PROPERTY

- **Client IP:** All logos, trademarks, business workflows, videos, and raw data provided by the Client shall remain the sole and exclusive property of the Client.

- **Custom Deliverables:** Upon full and final payment of the Development & Setup Cost, all custom-developed software, frontend assets, and databases specifically created for the Client under this Agreement shall be assigned to and become the exclusive Intellectual Property of the Client.
- **Agency IP:** Notwithstanding the above, the Agency retains all ownership rights to any pre-existing code libraries, underlying methodologies, generic algorithms, and third-party integrations (Agency IP) used to develop the application. The Agency grants the Client a non-exclusive, perpetual, royalty-free license to use such Agency IP solely as integrated into the final deliverable.

6. CONFIDENTIALITY

During the term of this Agreement and for a period of three (3) years thereafter, both Parties agree to maintain in strict confidence all proprietary or confidential information (including but not limited to business plans, customer data, carpenter data, QR algorithms, and financial details) disclosed by the other Party. Neither Party shall use or disclose such Confidential Information for any purpose other than to fulfil its obligations under this Agreement, except as required by law.

7. SUBCONTRACTING

The Agency shall have the right to subcontract any portion of the development or support services under this Agreement to third-party independent contractors or affiliates. However, the Agency shall remain fully responsible and liable for the performance of all its obligations under this Agreement, ensuring that any subcontractor complies with the confidentiality and intellectual property terms outlined herein.

8. GOVERNING LAW & JURISDICTION

This Agreement shall be governed by, construed, and enforced in accordance with the laws of India. Any disputes, claims, or controversies arising out of or in connection with this Agreement shall be subject to the exclusive jurisdiction of the competent courts situated in Nohar, District - Hanumangarh, Rajasthan, Bharat.
